Applied Polymer Systems

Seva Bray
519 Industrial Drive
Woodstock, GA 30189
Phone: 678-494-5998
info@siltstop.com

Booth # 27

Applied Polymer Systems founded in 1997 is a manufacturer of anionic polyacrylamide based erosion control and water clarification products. Applied Polymer Systems (APS) has an innovative approach to polymer enhanced best management practices using site specific polymers to optimize results and reduce costs. This approach has been used in numerous construction, and mining operations within the United States and Canada since 1993 and has led to significant increases in performance. All APS products are environmentally friendly which is proven by the company's extensive third party EPA certified toxicity reports. APS is the inventor of the Floc Log and Pond Log which are used to clarify water by flocculating out turbidity including sediment, nutrients, and heavy metals. The APS Silt Stop Powder is used for stabilizing slopes to prevent erosion and sedimentation. Online there are numerous case studies, product information, and toxicity reports at www.siltstop.com.

AquaShield

Eric Rominger
2733 Kanasita Drive, Ste 111
Hixson, TN 37343
Phone: 423-870-8888
erominger@aquashieldinc.com

Booth # 33 & Silver Sponsor

AquaShield, Inc. manufactures an innovative line of patented Stormwater Treatment Systems from high performance materials that are lightweight, chemically inert, and easily installed – Aqua-Swirl® hydrodynamic separator, Aqua-Filter™ inline stormwater filtration system, Aqua-Guardian catch basin insert, GO-Filter™ mobile treatment system, and Bio-Filter™ to effectively treat highly contaminated stormwater runoff and protect environmentally sensitive receiving waters.

Belgard Commercial Hardscapes

Aaron Faubli
1443 Battlecreek Road
Jonesboro, GA 30236
Phone: 678-758-7155
aaron.faubli@oldcastle.com

Booth # 10 & Silver Sponsor

Belgard is fundamentally committed to the health and safety of our products, environment, people and community. We develop products with specific environmental benefits and invest in the research and development of new, environmentally responsible products, practices and technologies. Our line of permeable pavers reduces water run-off, allowing the water to gradually filter back into the soil naturally, resulting in the control and stabilization of soil erosion and control of our ever increasing Stormwater. We do not only offer permeable paver products but can also help with design for the Design Community.

ajones@teamipr.com

Booth # 43

Inland Pipe Rehabilitation (LLC) has grown itself into an industry leader in regional storm and sanitary sewer rehabilitation providing trenchless rehabilitation and construction management services. IPR and its affiliates are able to provide its customers with technologies in a vast majority of trenchless solutions, including, EcoCast, CIPP lining, Pipe Bursting, and Slip-Lining. A leader in providing environmental solutions, in 2009 IPR was ranked No. 4 on the Crain's list of largest Environmental Companies for best practices in green technology. Our Ecocast product is an example of our green technology practices. EcoCast represents the evolution of a traditional structural cementitious product to a Nano-Ceramic Geopolymer that is precision sprayed or spun onto an existing host structure such as culverts, manholes, wet wells and outfalls. As IPR continues to grow and research new markets in the trenchless sewer industry, our mission is toward the employment of dedicated individuals focused to increasing customer satisfaction.

Booth # 3

K.B. Industries, Inc. created the world's first flexible porous paving in 2001 & offers a comprehensive suite of proven products & solutions to solve the toughest infrastructure challenges. From our category leading KBI Flexi®-Pave to our newest innovations in water treatment & shoreline protection, we combine technology and experience to solve problems using our innovative materials and designs. We recreated & revolutionized the porous paving industry with the introduction of the original KBI Flexi®-Pave. By combining recycled passenger tire rubber along with rock aggregate in a monolithic surface, we created a massively porous, but structural material that can be used for a variety of infrastructure application to great success. Don't settle for imitators; only KBI Flexi®-Pave has more than a decade of proven testing & successful projects from around the globe. Never satisfied with good enough, we continue to innovate through new products & applications, remaining a thought leader in the infrastructure market. For us, it's not just about recycling tires or providing new products; it's about solving universal infrastructure problems using better ideas & smarter materials.

Booth # 16

The Tennessee Stormwater Association (TNSA) is a 501(c)3 non-profit organization created in 2008, with the mission to assist local governments with State and Federal clean water law compliance. TNSA is Tennessee's premier organization for stormwater professionals and aims to protect and improve the quality of the waters of Tennessee through the exchange of information and knowledge from its experienced and professional membership base. TNSA membership is composed of designated Municipal Separate Storm Sewer Systems (MS4s) including local governments (city and county), universities, military installations, and other entities such as TN Department of Transportation (TDOT). Non-MS4 members include other non-profits, Tennessee State, sub-state or federal government entities, engineering, scientific and management firms and other organizations with an interest in stormwater. TNSA provides resource offerings such as printed publications, public service announcements, bulk lab testing, training opportunities, community outreach, etc., and offers a unified statewide approach to educational campaigns and watershed protection efforts.

We make innovative products to clean stormwater and verify infiltration BMP's. The SAFL Baffle is Patented, 100% stainless steel, made in the USA, developed and tested for 4 years at the University of Minnesota – St. Anthony Falls Laboratory (SAFL), installed in 24 states, Puerto Rico and Canada. 3rd party (municipality) proven results capturing twice the sediment within existing sump structures. Perfect for retrofit, easy to maintain and budget friendly. Our NEW product is the MPD Infiltrometer. Verify infiltration BMPs for design, construction, and long term monitoring. Perform 20 Ksat tests in 3 hours, automated reports generated in minutes. Check out www.UpstreamTechnologies.us or call 651-237-5123 for more information and pricing.

Booth # 26 & Gold Sponsor

For more than 48 years, Vaughn & Melton has been working to keep our promise to help keep the flow of commerce and community moving forward by designing bridges, roads, tunnels, parks, greenways, water/wastewater treatment facilities and commercial developments. We help our municipal and state clients keep water clean and update roadways so you can safely and efficiently travel to where you need to go, and we work with our commercial clients to add homes, retail and industry to your hometowns. We thrive in an organizational culture where each day is filled with exciting opportunities to assist our clients with their needs of serving others through providing infrastructure to live, work and play.

Wildlands Engineering, Inc. is a multidisciplinary group of water resources professionals. Our team consists of engineers, environmental scientists, GIS specialists, planners, ecologists, and hydrologists, all of whom are dedicated solely to improving the water quality, stability, and ecological health of our watersheds. We're a leader in water resources engineering and ecosystem restoration in the southeastern and mid-Atlantic United States due to the skills and abilities of its diverse and talented staff. We provide water resources engineering including streambank stabilization and rehabilitation, watershed planning, stormwater management, and ecosystem restoration. We're committed to improving the environment and exceeding our clients' expectations by providing expert services in an ethical, innovative, and time sensitive manner.
